A;Title: Five putative subclasses of swine IgG identified A;Reference number: I47158; MUID:95015845
A;Status.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: protein
A; Molecule type: protein
A; Mesidues: 139-131;155-172, 'D',174-184, 'A',186,'E',188-200,'D',202-217,'E',219-232,'Q',
A; Nete: this has the e15 allotypic marker, 185-Ala
C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin C region; immunoglobulin homology
C; Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin
F; 20-82/Domain: immunoglobulin homology <IM2>
F; 213-319/Domain: immunoglobulin homology <IM3>
F; 173/Binding site: carbohydrate (Asn) (covalent) #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a fusion protein comprising of TNF alpha fused to the C-terminus of the heavy chain of the human monoclonal antibody 425 (hmAb425). The hmAb425 has specificity for the human EGF receptor. The invention claims for a new pMCLDHAP tricistronic vector (V18096) for the expression of an antibody-cytokine fusion protein, hmAb425-TNF alpha. The TNF alpha sequence can be substituted by the IL-2 sequence. The vector also contains a strong promoter/enhancer unit, a selection marker gene and at least two poliovirus derived internal ribosomal entry site (IRES) sequences. The vector can be expressed in mammalian host cells for the production of heteromeric fusion proteins. This expression system is claimed to produce the heteromeric proteins in high yields.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Oligo:cistronic expression vector - useful for production of, e.g. MAb425/TNF-^a or MAb425/IL-2 antibody fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 1998-207400/18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This represents a recombinant metFc-OB protein variant which consists of an Fc region of human immunoglobulin [19] fused to a human OB (obesity) protein. The invention provides a human OB protein suspension that: contains at least 0.5 mg/ml of the human OB protein derivatised by attachment of the Fc region of an 19 to the N-terminus of OB, and has a OB H 6-8. The suspensions are used to reduce weight, adiposity and blood lipid levels, to treat or prevent diabetes type II, and to increase lean mass and insulin sensitivity. They may be used in conjunction with insulin, hypoglycaemics, anthypertensives, diuretics, appetite suppressants etc. These suspensions are stable and active at physiological pH and are ready-for-use formulations that do not require physiological pH and are ready-for-use formulations that do not require freezeing or freeze drying. As they are very concentrated, only small volumes are required and they provide a sustained-release effect, with increased potency and reduced frequency of injection.
                                                                                                                                                                                                                                                                                                                                                                                                       Matches

The invention provides Fc-OB fusion proteins whereby the Fc region of an immunoglobulin or its analogue is linked, either directly or indirectly using a linker, to the N-terminus of an OB protein or its analogue. The Fc-OB fusion proteins are claimed to demonstrate increased stability and clearance rate and decreased degradation as compared to OB protein or a fusion of Fc to the C-terminus of the OB protein. These Fc-OB fusion proteins are also claimed to be useful for treating excess weight in an individual or animal or for treating co-morbidities associated with excess fat such as diabetes, high blood lipid level, arterial sclerosis and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant human MetFc-OB variant 2 protein; chimeric; immunoglobulin; high blood lipid level; arterial sclerosis; stroke; Fc-OB fusion protein; diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New fusion proteins of OB and Fc \, used for treating e.g. excess weight, diabetes, arterial sclerosis, arterial plaque, high blood lipid level, gall stones or stroke

                                                                                                                                                                                                                             This can be used for modulating a mammalian immune system wherein, the bloactive substance is an antigen characteristic of a pathogen of an autoimmune disease, an allergen, or a tumour. The delivering method is used to deliver therapeutics, including chemotherapy agents, cytokines including incerferon, hormones, including insulin and human growth hormone, fertility drugs, calcitonon, calcitized and other bloactive steroids to intestinal, mucosal and lung epithelium. The method is also used for transepithelial delivery of antigens to provoke tolerance and immunity. The method provides an immunisation, that specifically targets the mucosal surfaces, and does not have the risks associated with injections, including needle transmission of AIDS or hepatitits, of prior art immunisation methods. The present sequence represents the amino acid sequence of an Fc fragment of human immunoglobulin IgG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to methods of delivering molecules to a mammal by administering a conjugative of a therapeutic or a bioactive substance, and an FoRn binding partner targeted to epithelial cells expressing FCRn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Delivering therapeutics, particularly antigens to epithelial cells -comprises use of a conjugate of the therapeutic and an FcRn binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pathogen; autoimmune disease; allergen; tumour; therapeutic; cytokine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
       from DNA cassettes encoding each receptor component. In a claimed cell activation process an effector cell is transformed with DNA encoding a chimeric receptor containing 2 or more different cytoplasmic signalling components. Also claimed is use of DNA encoding a recombinant chimeric receptor in a DNA delivery system. The DNA delivery systems can be used for the activation of cells to provide e.g. an increase in cell proliferation, expression of cytokines with e.g. pro- or anti-inflammatory responses, stimulation of cytolytic activity, differentiation or other effector functions, antibody secretion, phagocytosis, tumour infiltration and/or increased adhesion. They can be used in the treatment of e.g. infectious disease, inflammatory disease, cancer, allergic/atopic disease, congenital disease, dermatologic disease, neurologic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell activation; chimeric receptor; DNA delivery; CTMO1; scFv; 19G1; T cell receptor zeta chain; cell proliferation; cytokine; inflammation; effector; cell differentiation; antibody secretion; phagocytosis; tumour infiltration; adhesion; infection; cancer; allergy; rheumatoid arthritis; osteoarthritis; asthma; eczema; inflammatory bowel disease; cystic fibrosis; sickle cell anaemia; psoriasis; multiple sclerosis; transplant rejection; diabetes; graft versus host disease; human; therapy.
                                                                                                                                                                                                                                                         This protein comprises a chimeric receptor consisting of an scFv engineered from anti-CD3 human antibody CTWO1 linked to an extracellular spacer comprising the human IgG1 hinge, CH2 and CH3, linked to transmembrane and intracellular regions of the human T cell receptor zeta chain. It can be expressed in host cells (e.g. Jurkat) using a chimeric receptor gene (see T90512) constructed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC of human T cell receptor zeta chain, fused to the intracellular region CC of human CD28. It can be expressed in host cells (e.g. Jurkat) CC using a chimeric receptor gene (see T90513) constructed from DNA CC cassettes encoding each component of the receptor. In a claimed cell activation process an effector cell is transformed with DNA encoding a chimeric receptor containing 2 or more different cytoplasmic signalling components. Also claimed is use of DNA encoding a recombinant chimeric receptor in a DNA delivery system. The DNA delivery systems can be used for the activation of cells to provide e.g. an increase in cell proliferation, expression of cytokines with e.g. pro- or anti-inflammatory responses, stimulation of cytokines with e.g. pro- or anti-inflammatory responses, stimulation of cytokines with e.g. pro- or anti-inflammatory responses, stimulation of cytokines with e.g. pro- or anti-inflammatory responses, stimulation antibody secretion, phagocytosis, tumour infiltration and/or increased adhesion. They can be used in the treatment of e.g. disease, congenital disease, dermatologic disease, ransplants and metabolic/idiopathic disease, neurologic disease, transplants and metabolic/idiopathic disease (claimed). In particular, they can be used in the treatment of rheumatoid erzema, cystic fibrosis, sickle cell anaemia, psoriasis, multiple sclere, as some contractions, sickle cell anaemia, psoriasis, multiple

  The plasmid pSAB152 contains the DNA sequence encoding the LFA-3 signal sequence, the amino terminal 92 amino acids of mature LFA-3, ten amino acids of the hinge region of IgG1 and the CH2 and CH3 constant domains of IgG1 (see Q28678-9 and Q28681-2 for details of the construction of pSAB152). A NotI fragment containing the coding sequence of pSAB152 was used in the construction of expression vector pMDR(92)Ig-3 which can be stably maintained in CHO cells to achieve continuous expression of LFA3TIP. The fusion protein can bind to CD2 and inhibit T cell activation, making it useful to the stable to the content of th
                                                                                                                                                                                                                                                                                                                                                                                    CD2-binding domain of lymphocyte function associated antigen-3 and DNA — for diagnosing and treating inflammation and auto:immune diseases, e.g. systemic lupus erythematosus and rheumatoid arthritis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                   Modulation of LFA3/CD2 interaction by administration of a CD2 binding agent inhibits CD2 signalling and T cell proliferation and activation and more particularly modulates the number and/or distribution of memory effector T lymphocytes. The method can be used for treating a condition in a subject where the condition is characterized by memory effector T lymphocytes playing a role in the pathogenesis of the condition such as psoriatic arthritis, rheumatoid arthritis, multiple sclerosis, atopic dermatitis, uveitis, inflammatory bowel disease, Crohn's disease, ulcerative colitis and cutaneous T cell lymphoma and where the method comprises administering to the subject an amount of CD2 binding agent sufficient to modulate the memory effector T lymphocytes. The methods provide inhibition of T cell specific interactions for all antigens present, inhibition of T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Selective modulation of memory effector T lymphocytes by administration of a CD2 binding agent which inhibits the CD2/LFA-3 interaction useful for treating conditions such as inflammatory bowel diseases, psoriatic arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page 75-76; 76pp; English.

This sequence is a fusion protein of the rabbit transforming growth factor-beta receptor II (TGF-betaRII) and an antibody Fc region. The encoded protein is an example of a protein of the invention, which are isolated TGF-beta receptor fusion proteins that competitively inhibit binding of TGF-beta to TGF-beta receptor. The fusion protein can be used in a method for lowering the levels of TGF-beta in an individual having arthritis. It can also be used to treat medical conditions such as fibroproliferative disorders. The fibroproliferative disorder is a kidney, intraocular or pulmonary fibrosis, especially selected from diabetic nephropathy, or myelofibrosis. The fusion proteins can also be use to treat collagen vascular disorders, including systemic sclerosis, polymyositis, scleroderma, dermatomyositis, and systemic lupus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Transforming growth factor-beta receptor; TGF-beta receptor; arthritis; fusion protein; fibroproliferative disorder; diabetic nephropathy; glomerulonephritis; proliferative vitreoretinopathy; myelofibrosis; collagen vascular disorder; therapy; rabbit.

                                  This sequence is a fusion protein of the human transforming growth factor-beta receptor II (TGF-betaRII) and an antibody Fc region. The encoded protein is an example of a protein of the invention, which are isolated TGF-beta receptor fusion proteins that competitively inhibit binding of TGF-beta to TGF-beta receptor. The fusion protein can be used in a method for lowering the levels of TGF-beta in an individual having

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SX S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          growth factor beta (TGF-beta) type II receptor fused to the Fc portion of human IgG1. The fusion protein has higher affinity for TGF-beta than fusion protein comprising the non-variant form of the receptor. The fusion protein contains soluble TGF-beta receptor constructs that are devoid of a transmembrane region (and are secreted from the cell) but retain the ability to bind TGF-beta. The protein competitively inhibits binding of TGF-beta to cellular receptors and/or forms an inactive complex with TGF-beta. The protein is used to reduce levels of TGF-beta, competative conditions associated with overexpression of TGF-beta, especially fibroproliferative diseases, e.g. renal. Intra-ocular or pulmonary fibrosis; diabetic nephropathy; myelofibrosis; collagen vascular disease, e.g. systemic selecrosis, polymyositis, scleroderma, dermatomyositis or systemic selecrosis, polymyositis, scleroderma, dermatomyositis or systemic selecrosis, polymyositis, solubles associated with restenosis. It is also used for treating wounds, to prevent overproduction of connective tissue and so prevent adhesions or scarring, and to prevent post-radiation fibrosis (by administration to patients about to undergo radiation therapy).

The fusion protein has higher affinity for TGF-beta than fusion proteins comprising the non-variant form of the receptor. The fusion protein contains soluble TGF-beta receptor constructs that are devoid of a transmembrane region (and are secreted from the cell) but retain the ability to bind TGF-beta. The protein competitively inhibits binding of TGF-beta to cellular receptors and/or forms an inactive complex with TGF-beta. The protein is used to reduce levels of TGF-beta, especially fibroproliferative diseases, e.g. renal, intra-ocular or pulmonary fibrosis; diabetic nephropathy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         glomerulonephritis; proliferative vitreoretinopathy; myelofibrosis; collagen vascular disease, e.g. systemic sclerosis, polymyositis, scleroderma, dermatomyositis or systemic lupus crythematosus; and fibrosis associated with restenosis. It is also used for treating wounds, to prevent overproduction of connective tissue and so prevent adhesions or scarring, and to prevent post-radiation fibrosis (by administration to patients about to undergo radiation therapy).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New fusion protein of a splice variant of transforming growth factor-beta receptor, for inhibiting the growth factor, e.g. in treatment of fibrosis \,

The present sequence is a fusion protein that consists of mature human IFN-beta-la and mouse IgG2a Fc domain separated by an enterokinase linker. The fusion protein is useful for inhibiting angiogenesis in a patient. It may also be used to treat multiple sclerosis, fibrosis, inflammatory and autoimmune diseases, cancers, hepatitis and viral infection characterised by

                                                                                                                                                                                                                                 The patent discloses fusion proteins comprising glycosylated interferon beta (IFN-beta) especially IFN-beta-la, linker groups and non-IFN-beta proteins, especially an immunoglobulin (Ig) protein. The present sequence is a fusion protein consisting of a vascular cell adhesion molecule-l (VCAM-l) signal sequence, a modified human IFN-beta-la and human IgGl Fc domain, which are directly fused without a linker sequence. The fusion protein is useful for inhibiting anglogenesis in a patient. It may also be used to treat multiple sclerosis, fibrosis, inflammatory and autoimmune diseases, cancers, hepatitis and viral infection characterised by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          /label- natural_human_IFN-beta-la

The present sequence is a fusion protein consisting of a vascular cell adhesion molecule-1 (VCAM-1) signal sequence, a modified human IFN-beta-la which is linked to human IgG1 Fc domain via a G4S linker sequence. The fusion protein is useful for inhibiting angiogenesis in a patient. It may also be used to treat multiple sclerosis, fibrosis, inflammatory and autoimmune diseases, nepatitic and viral infection characterised by
